

# **Sprint Report 5**

3/15/2013

James Wiegand

Joshua Kinkade

Christopher Jensen

Brian Vogel

## **iOS**

Top-level framework and Garage Door Controller are in beta state; final testing to commence in coming sprint.

## **Resolution Server**

Resolution Server is in alpha state; initial testing is underway, and some revisions are expected as integration begins.

## **Base Station**

Base Station is in alpha state, with a threaded server and some basic configuration files used to control users and configure device interfaces. Currently TCP/IP and HCL interfaces are not supported.

## **Hardware**

The garage door opener has entered a beta state, with the ability to open a garage door over USB. It was discovered that the HCL device does not perfectly integrate with the relay board, so some minor modifications will be necessary to use Bluetooth to communicate with the device.
